

Simple addition (tag: sample)

Training suite Available memory: 128 MB. Maximum running time: ? s.

Write a program that reads two integers, a and b , from the standard input and prints their sum to the standard output.

Input

The first (and only) line contains two integers, $a, b \in [0, 10^{18}]$, which are the numbers to be added together.

Output

Print a single integer – the sum of a and b .

Subtasks

Subtask	Constraints
1	$a, b \leq 10^9$
2	No additional constraints
